Dear Samsara Team,

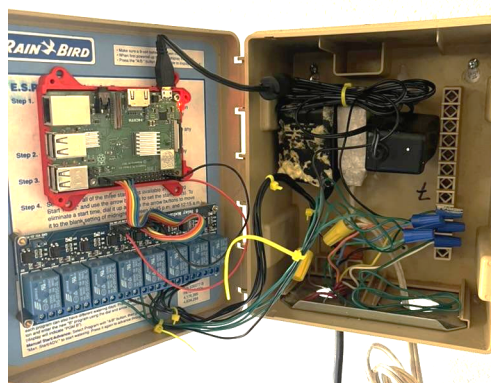

I was excited to see the Senior Software Engineer role open at Samsara. While my professional background is in web and back-end service development, I have always had a strong passion for the IoT space. If you don't believe me, see the sprinkler system I built below using a Raspberry Pi and relay to remotely control and automate watering in my yard. I enjoy the practical solutions we can create by connecting input and output devices to physical systems—and sometimes, they're just really fun to build! It's inspiring that your company has been a leader in this technology to integrate, manage, and maintain company fleets. I would love to be a part of growing your established solutions and re-imagining and innovating new solutions as the company continues to evolve.

I have 10 years of industry experience split between consulting and full stack product development. As a consultant, I worked with technical teams across various different industries, implementing IBM product solutions to solve complex problems in diverse customer environments. These experiences strengthened my ability to adapt and communicate effectively, enabling me to deliver practical solutions in challenging situations.

In my current role as a full stack developer, I focus on feature-driven development, planning and executing technical implementations, and integrating new features into an evolving product. My work encompasses the full software lifecycle, from discovery to deployment, where I lead specific feature development, balancing high-level strategy with technical details. Recently, my development work has included an even blend of back-end work – primarily developing Node.js microservices – and front-end development – building web app interfaces with Vue and React. Although these are my current practiced skills, I have always adapted to the technologies needed for evolving project requirements.

I'm eager to bring my experience and personality to Samsara and support your mission of using IoT to empower your clients and provide them with technical advantages to improve and grow their businesses. Thank you for your consideration. I look forward to discussing how I can contribute to your team.

Best Regards,

(Home sprinkler system)
