Dear Workiva Team,

I was excited to see the software engineer role open at Workiva. Learning about the way your platform brings together customer processes, data, and teams has really stood out to me. In my experience working with large enterprise clients, I've seen how common it is for companies to struggle with data silos, fragmented teams, and redundant business processes. The business relationships Workiva has developed with such prominent companies shows the real impact you're making by securely unifying and simplifying their systems.

With over 10 years of industry experience split between consulting and full-stack product development, I have developed a diverse skill set capable of tackling a wide range of challenges. As a consultant, I worked with technical teams across different industries, solving complex problems in widely diverse customer environments. These experiences strengthened my ability to adapt and communicate effectively, helping me deliver practical solutions in challenging situations.

As a full-stack developer, I focus on feature-driven development, planning and executing technical implementations, and integrating new features into an evolving product. My work covers the full software lifecycle, from discovery to deployment, balancing both high-level strategy and technical details. Recently, my work has been about 70% backend, primarily developing Node.js microservices, and 30% frontend, building interfaces with Vue and React.

I'm eager to bring my experience and personality to Workiva and support your mission of streamlining processes and enhancing collaboration for your clients. Thank you for your consideration. I look forward to discussing how I can contribute to your team.

Best Regards,
